Legend:

0 = Not applicable to the given stakeholder or completely useless

1 = Relatively relevant

2 = Somewhat important

3 = Very important

Stakeholders descriptions

- Funding agency: the European Commission, which funds every project and pays for the website;
- Funding agency's partners: those companies, research centers or universities involved in some of the funded projects;
- Academic researchers: scientists belonging to an academic institution who work for any funded project;
- Industrial researchers: like the latter, but they work for a company R&D department;
- Companies: external business enterprises interested in the exploitation of some project results for economic purposes;
- Project leaders: those people or teams that lead a project;
- Project participants: those people or teams that participate in a project.

Introduction >

Our researchers are delving deeply into new technologies, as the try to explore and develop better solutions to great problems. The PHICT program embraces over 15 different research subjects and supports about 30 international projects. You can find more information in the list below:

Group Links >

[Robotics](#)

Main topics: biotechnology integration, compliant materials, miniaturization and improvement of sensors, development of new planning algorithms, computer vision, low-power actuators, spy robots.

[Mobile Networks](#)

Main topics: large-scale broadband open networks, protocol standardization and developing (with a focus on security issues), integration of current european digital services.

[Contributors](#)

The European Commission is interested to developing projects and improving technologies that can improve humans' life, from economy to mobile technologies, from wellness to renewable energies.

The European Commission could also be involved into projects born outside the EU, connecting various developer teams and helping the coordination between them.

[Submission Info](#)

A team will evaluate the proposal and will inform you if the proposal appears to be good.

Proposal are published in the Official Journal of the European Union.

With your proposal you must provide, In addition to the description of the thematic areas, topics or research objectives, calls comprise information on the following items:

- 1) Closure date(s)
- 2) Indicative budget and its distribution per area and/or instrument
- 3) Minimum number of participants
- 4) One-stage or two-stage submission and evaluation procedure
- 5) Non-standard evaluation criteria
- 6) Indicative delays for evaluation and selection of proposals

History

< Structural Links

The Politecnico di Milano is the largest technical university in Italy, with about 36,500 students. The Politecnico offers undergraduate, graduate and higher education courses in Engineering, Architecture and Design.

The university is ranked as the 48th best technical university in the world according to the QS World University Rankings.

Among the program participants, it was among the firsts to join and its contribution to PHICT is considerable. In the first international academic meeting, it was given a total budget of 10.5 millions and...

Open Broadband Access Networks

The OBAN proposal introduces an innovative approach to establish a broadband mobile network in line with present B3G visions. The concept is based upon an Open Access Network (OAN) approach characterised by that all private wireless LANs and broadband access lines are made available for public use, thus the stationary users (the hosts) can continue to use their wireless LAN as before, and that casual passing users can access and maintain communication via these access points.

Project Overview Main Goals Publications

BIM Project

The aim of this research area is the development of Electroactive Polymer (EAP) based Bio-inspired Intelligent Materials and Mechanisms.

We are conducting an oriented research effort resulting in a novel class of electrically controlled intelligent actuators based on polymer materials. For this purpose we are developing electroactive polymers (EAP) and studying their actuation properties and limitations for integration into a device. Due to the properties of EAP, we expect to obtain an extremely light, soundless, flexible, and very efficient actuator, with built-in mechanical sensing, matching and even besting human muscles. We name this goal "Artificial Muscles".

Introduction >

The PHICT program supports several robotics-related project, whose main aim is that of improving currently known methods and seek new solutions to still open problems. The main focus is on biology integration, advanced mapping and planning strategies and development of devices for military use.

Group Links >

[BIM Project](#)

The main goal of this research area is the development of Electroactive Polymer (EAP) based Bio-inspired Intelligent Materials and Mechanisms.

[Social Development](#)

One of the main challenges faced by social robots is how to provide intuitive, natural and enjoyable usability for the End-User. In the human normal environment, social robots could be important tools for education and entertainment.

Interaction scenario #1

Persona: European academic researcher

Interaction:

The user hears for the first time of the PHICT program from a colleague at work. He is interested in the funding activity sponsored by the European Commission, because his laboratory is having economical troubles.

He starts visiting the site and goes straight to **[Research Themes]**, scrolling down until he reaches his research topic in the field of **[Robotics]**. In the page listing all projects relating to that subject, one in particular catches his attention and the navigation proceeds to **[BIM Project]**. After reading the description, he downloads some documents from the **[Publications]** page in the project area. With a glimpse, he notices that no **[Main Result]** has been posted yet; following the **[Workplan Activities]**, he sees the list of scheduled activities and then clicks on the first. The resulting **[Activity]** page reports a starting date ahead of several months and thus he decides to join the project.

Interaction scenario #2

Persona: Member of the European Commission

Interaction

The user wants to inspect the site to know what has been done with provided funds. He visits the site for the first time since it has been put online. From the home page, he clicks on the landmark **[Initiative]** to see the description of the program. Interested in discovering which projects have been completed, he clicks on **[History]** and is given a list of projects divided by starting year. The program is still young, so there are only a few entries. He chooses the first item, a **[Project]** about mobile networks: in the project page, he reads the description and then switches to **[Main Results]**. Here he finds out that great progress has been made in security and covering.

Interaction scenario #3

Persona: Company manager (internet security)

Interaction

The user is seeking for some researcher to hire in his company R&D department. He has been told by a friend that a big research project about elliptical cryptography is being completed in these months and some good researchers will then be unemployed. He opens the site, clicks on **[All Themes]** and then on **[Cryptography]** and looks for **[Ellipsis Project]**. From this page, he follows the link **[Involved Partners]**: there are only two big academic institutions involved. For each of them, he approaches the default **[Partner]** page and goes on to **[Involved Researchers]**. He scrolls down the results and finds those **[Researcher]**s involved in cryptography, reads their curricula and writes down their contacts from the **[Contacts]** page.
